

# European 4-in-One (E 4-in-1) Chainmaille Weave Bracelet Tutorial

Using 1/4" Silicone Rings and 16-gauge, 1/4" Anodized Aluminum Rings  
\*The aluminum ring being worked with is always highlighted in green.

To open a ring, use 2 sets of pliers and grab the ring on the left and right sides.

If you are right-handed, pull the right side of the ring forward and very slightly to the left toward you.

If you are left-handed, pull the left side of the ring forward and very slightly to the right toward you.

When closing the ring, bring the left and right sides together, making sure to leave no gap between the two. Align the ends as close as possible.

Start the weave using 4 silicone rings and 1 open aluminum ring.

Place all 4 silicone rings onto the aluminum ring and close the aluminum ring.

Lay the rings on a flat surface in the above configuration. 4 silicone rings are now captured in 1 aluminum ring, thus the name of the weave (4-in-1).

Take 2 more silicone rings and 1 open aluminum ring.

Weave your next aluminum ring through the front 2 silicone rings only and then add 1 silicone ring to the right side.

Add 1 more silicone ring to the left side of this ring. There are now 4 silicone rings captured by this aluminum ring.

Now that the second aluminum ring has 4 silicone rings captured, close the second aluminum ring.

Continue to repeat steps 8 through 11 until your desired bracelet length is achieved.

Once your desired bracelet length is achieved, take 1 last open aluminum ring to connect the two ends.

Line up the silicone rings on both ends of your bracelet. You can see that these last 4 silicone rings need to be gathered by 1 last aluminum ring to complete the 4-in-1 pattern.

Weave down under the right side silicone rings and up through the left side silicone rings with this last aluminum ring.

Close the last aluminum ring.

**Your bracelet is finished and ready to wear!**

This tutorial is a freebie! Use it and share it! It's my first tut, (a practice one for more to come), and it's a basic weave. Please let me know what you think of it- I would love to hear your comments and suggestions. Thanks!
